github.com/joserbatista

Summary

- 10+ years as a Software Engineer & Tech Lead, building scalable microservices for travel, betting, and telco
- AI-assisted development with Kiro (Claude), using agentic workflows, steering rules and MCP integrations
- Pragmatic and goal-driven, delivering high-quality solutions
- Experienced code reviewer and mentor, advocating clean code and best practices
- Former instructor for Git, Clean Code, SOLID principles, and Design Patterns, empowering 30+ developers
- Passionate about solving complex challenges and driving team success

Skills

- **Practices** – Agile, Test-Driven Development, Domain-Driven Design, Event-Driven Architecture, Hexagonal Architecture, CQRS, API-first
- **Languages** – Java (8 to 25), SQL, Scala, Kotlin, JavaScript/TypeScript
- **AI** – Kiro (Claude), agentic workflows, MCP, AWS Bedrock (LLM integration)

Tools

- **Frameworks** – Spring Boot, Quarkus, Hibernate, JUnit, Mockito
- **Cloud & Data** – AWS, Kafka, Docker, Kubernetes, Terraform, Datadog, PostgreSQL, MongoDB
- **Development** – IntelliJ IDEA, Postman, SoapUI, Bruno
- **Delivery** – Git, Maven, GitLab CI, Jenkins, Jira

Experience

Senior Backend Software Engineer – TUI (Sourcing)

OCT. 2025 – NOW

- Implement and support event-driven cronjobs that handle hotel accommodation data ingestion, transformation and distribution across multiple suppliers
- Design and develop supplier adapter integrations and data export pipelines, with Datadog dashboards monitoring export health per supplier and environment
- Reduced worst-case unit payload from 165 MB to under 1 MB by removing an $O(n^2)$ rule explosion, and fixed a multi-threading race condition that applied 100% discounts to all guests
- Use Kiro (Claude) IDE as a daily engineering partner: maintain versioned steering rules (workflows, local runs and before/after validation guides) and MCP integrations with Jira, GitLab, Datadog, AWS for end-to-end investigation, fixes and ticket documentation
- **Stack**: Java 25, Spring Framework, Kafka, PostgreSQL, AWS, Kubernetes, Datadog

Experience

Senior Backend Software Engineer – TUI (Wheels)

FEB. 2023 – OCT. 2025

- Event-driven Quarkus microservices on AWS (SNS/SQS) providing search, pricing, booking and post-booking flows
- Built 5 car rental supplier integrations end to end (search, book, amend, cancel) over SOAP and REST
- Designed and implemented On-Request booking service from scratch including scheduled supplier status checks, automatic supplier confirmation/cancellation and supplier reminder emails
- Consolidated 4 booking microservices into a unified Booking API and refactored ~10 services to Hexagonal Architecture
- Drove platform-wide standards across ~40 repos: shared error handling, CI versioning and SonarQube quality gates
- Built a translation service on Amazon Translate, with AI validation via AWS Bedrock (Claude)
- **Stack**: Java 21, Quarkus 3, MongoDB, PostgreSQL, AWS (SNS, SQS, Lambda, S3, ECS, Bedrock)

Senior Backend Software Engineer – Blip (Paddy Power Betfair)

JUL. 2022 – FEB. 2023

- Implement and support highly available and scalable services that interact with multiple feed providers to update competitions and events from external providers
- Implement and support Paddy Power Betfair's search engine
- **Stack**: Java 11, Scala, Kafka, Spring Boot, Apache Storm, Elasticsearch

Senior Backend Software Engineer – TUI (Flight Ancillaries)

SEP. 2021 – JUL. 2022

- Implement and support multiple microservices that interact with airlines for seat reservations and special service reservations (food, special baggage among others)
- **Stack**: Java 17, Spring Boot, Hibernate, MySQL, AWS

Senior Backend Software Engineer – Celfocus (Jawwy from stc)

JAN. 2020 – AUG. 2021

- Tech-lead of an agile team that designs and develops Jawwy Architecture Evolution Microservices
- Microservices designed using a CQRS + Hexagonal architecture and with an API-first approach
- Implementing Test-Driven Development and using CI/CD with Jenkins and Newman
- **Stack**: Java 11, Spring Boot, Hibernate, MongoDB, Postgres, Kafka, Axon Framework

Lead Backend Software Engineer – Celfocus (Product Catalogue)

MAR. 2019 – JAN. 2020

Leader of a team responsible for the design, development, and maintenance stages of the project

- In charge of aligning requirements and delivering solutions for Product Catalogue consumers
- Migrated from Weblogic + PLSLQ to Wildfly + Postgres
- **Stack**: Java 8, Drools, Spring Framework, Hibernate, Postgres, PLSQL

Full-stack Developer – Celfocus (Vodafone Ireland)

NOV. 2015 – MAR. 2018

- Collaborated in the design, development, and maintenance stages of the project
- **Stack**: Java 8, Spring Framework, Hibernate, Oracle PL\SQL and Ext.js 5.1

Education

Licentiate degree, Informatics Engineering, 17/20

SEP. 2012 – OCT. 2015

Instituto Superior de Engenharia do Porto, Porto

- Merit Scholarship – DGES (Academic Year 2012/2013)
